

Evolving from Products to Product Suite Solutions in High-Tech

Brian Cox
Sr. Director of Software Marketing
Hewlett-Packard Company

Challenges facing enterprise IT software deployments

- Abundance of software product offerings and features options overwhelms customers slowing purchase decisions
- Multiplicity of related product offerings creates horrendous installation duration and complexity
- Numerous layers in the software stack create paranoia of incompatibility upon installation and that installing patches will create further incompatibility

Case study:

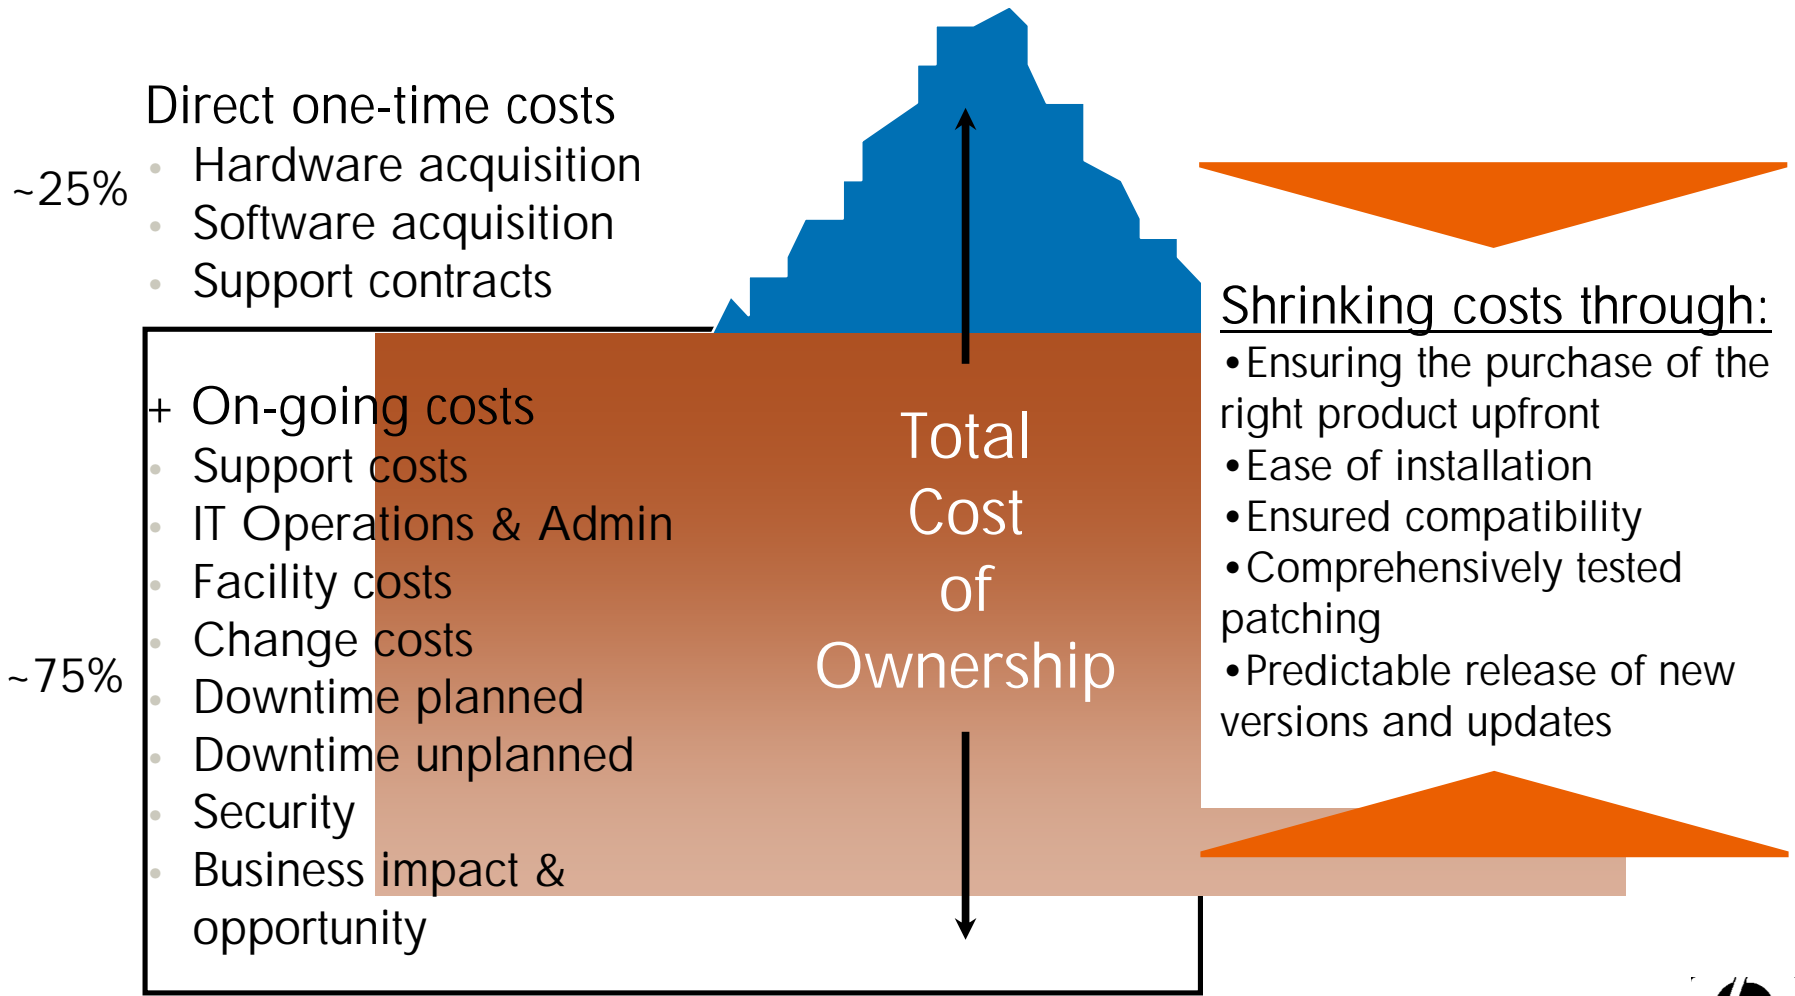

How to more cost effectively deploy HP's Unix software suite with higher customer satisfaction

- Simplify choice
- Ease installation
- Build confidence

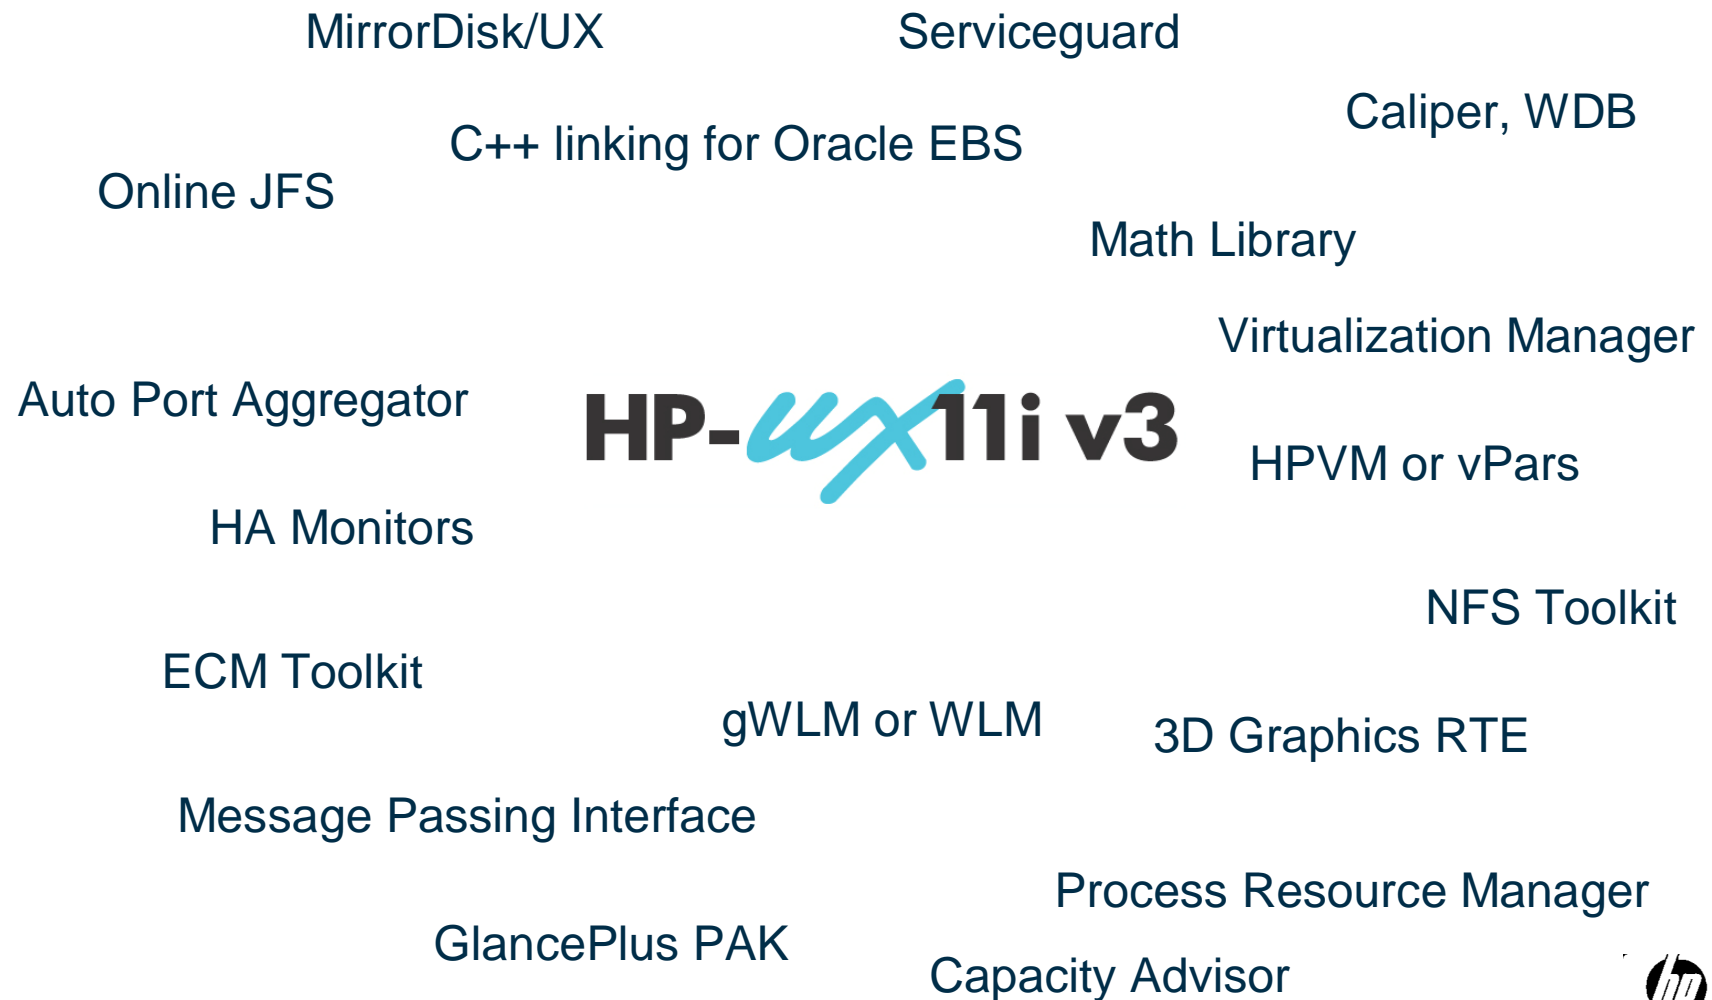

**Particularly needed when your *product sector matures* and no competitor has major features leads or gaps relative to competitors' offering:
TCO and Ease of Use
become the differentiating factors**

Where to focus to drive down TCO

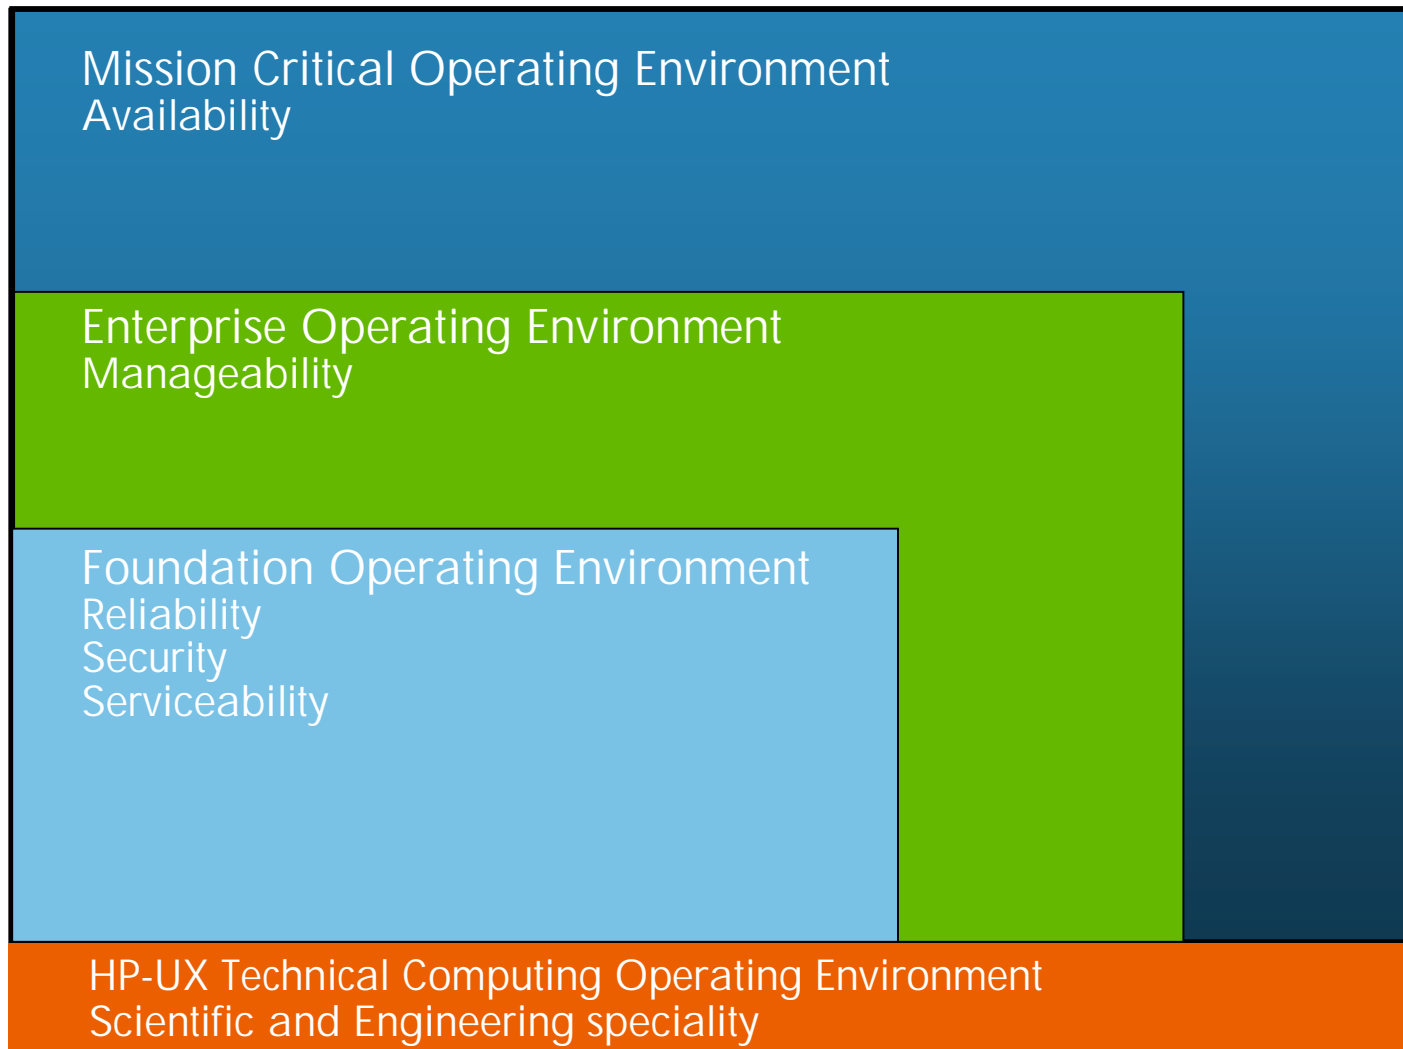

Freeing your customers' resources for innovation

HP's Unix Operating System and related system software

HP shifted to selling software bundles or product suites called Operating Environments

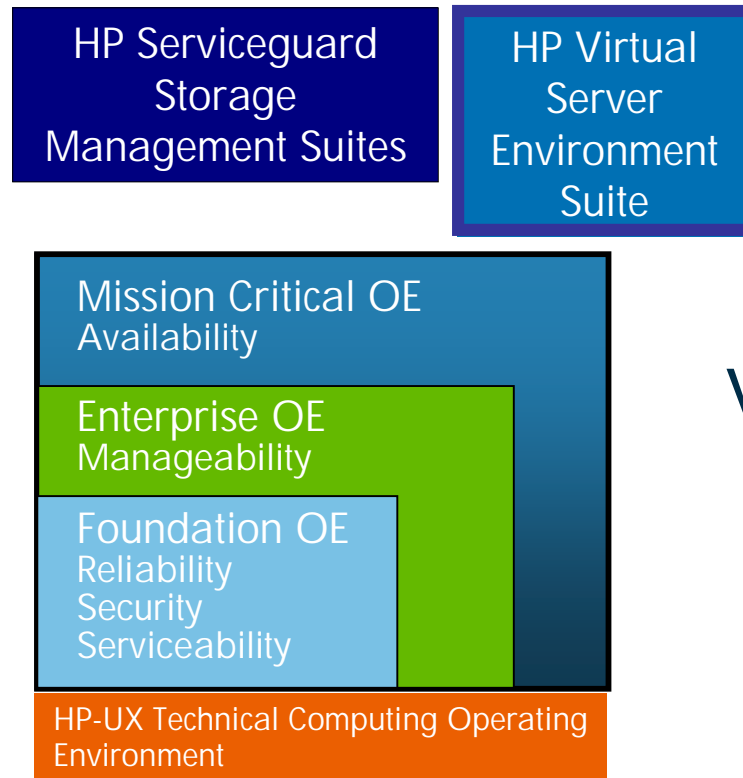

(circa 2000)

Software bundles cannot remain static as innovation adds more choice

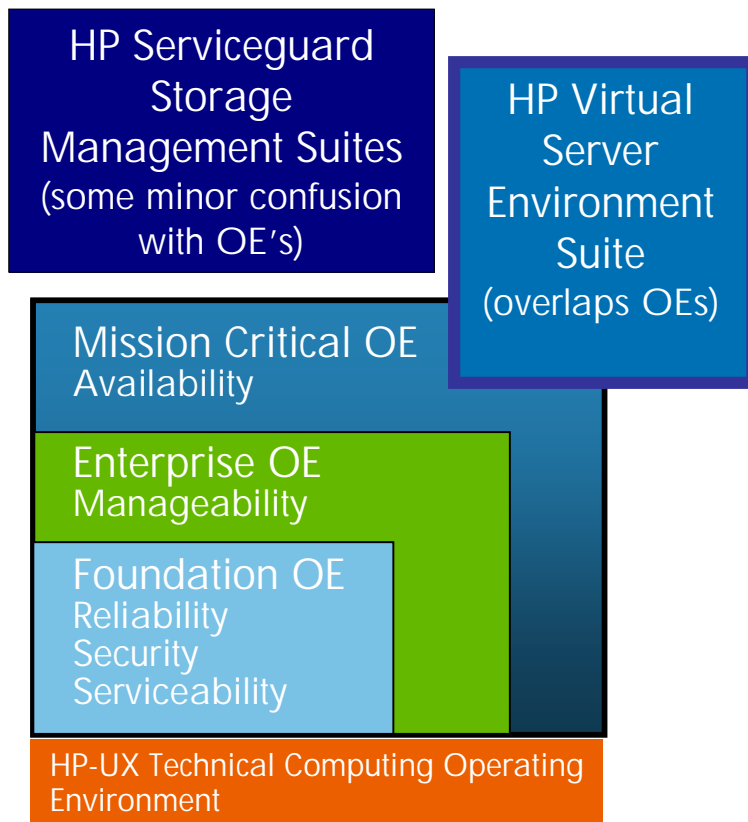

New High
Availability
Solutions

New
Virtualization
Solutions

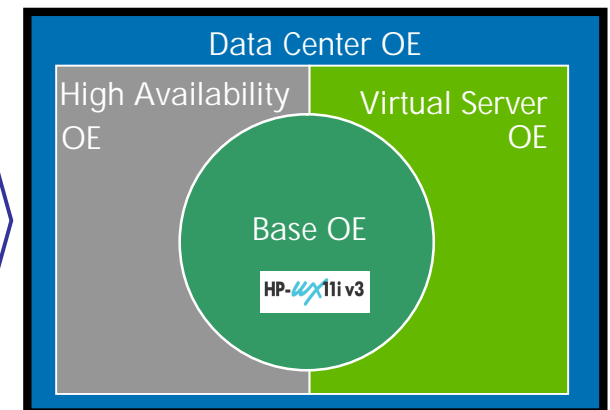

Need to further simplify as further software invention creates more choice

- Pioneered in 2000. . .

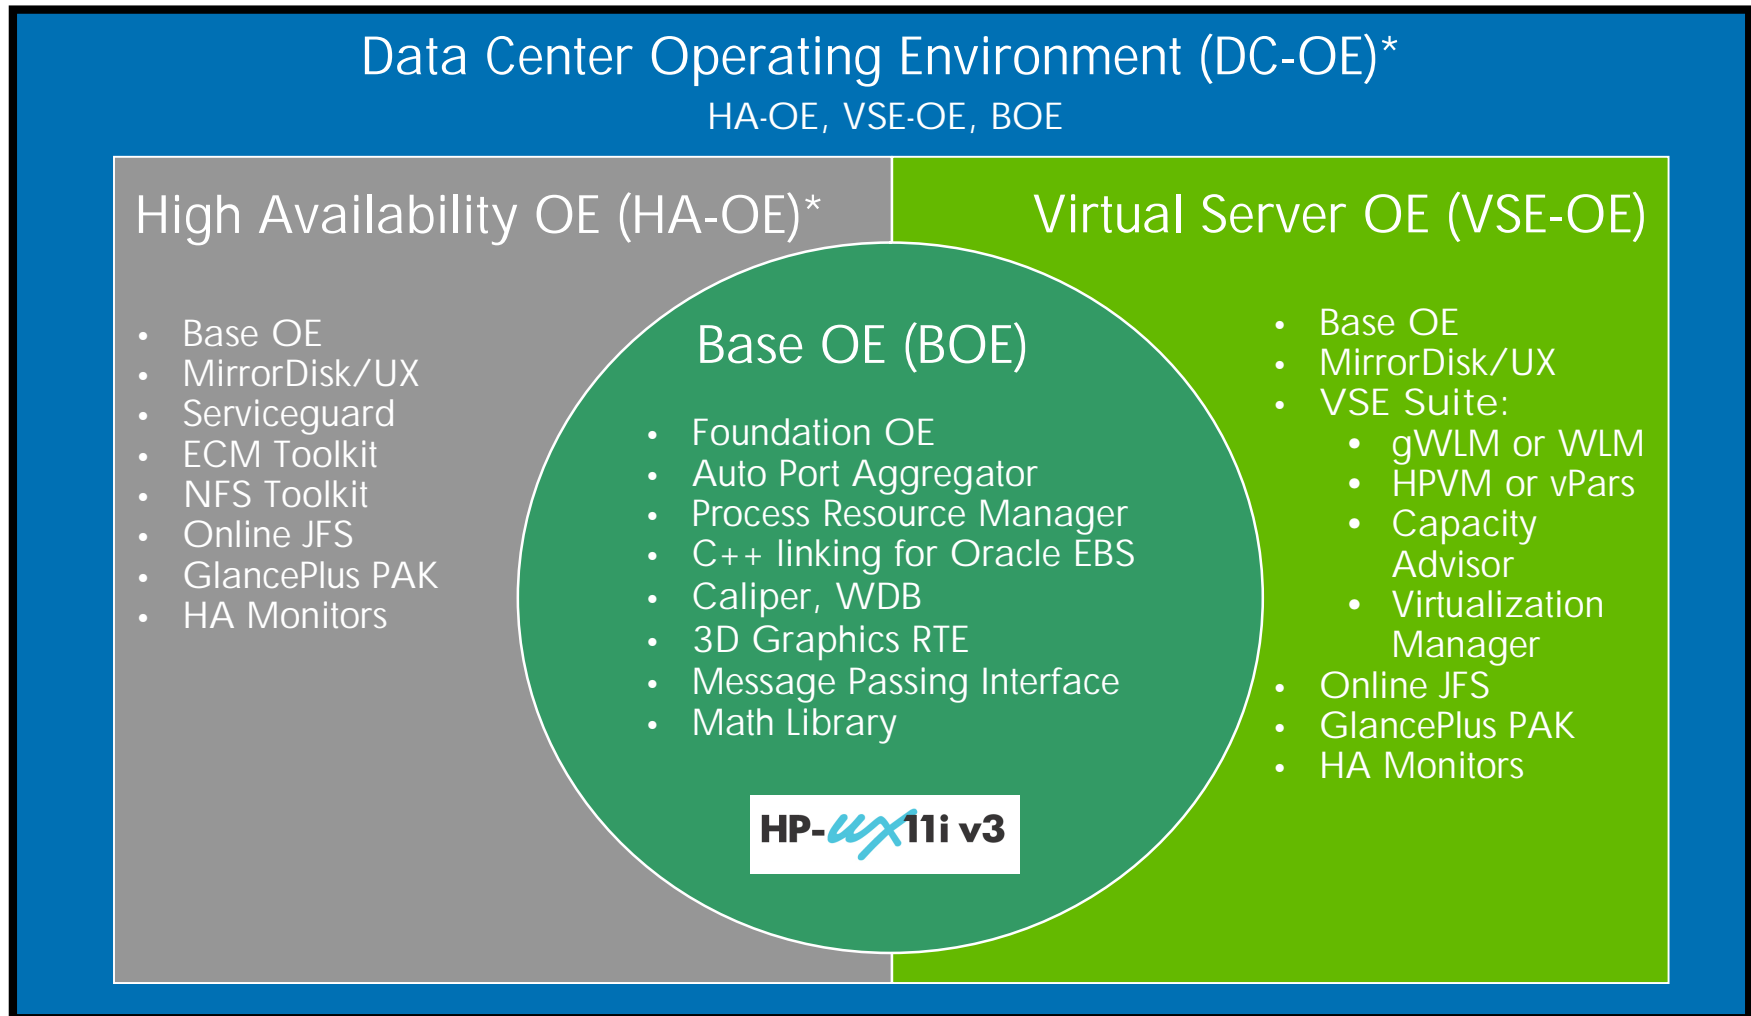

- Updating value in 2008

- Match customer needs
- Simpler
- More complete
- Ahead of competition

New HP-UX 11i v3 Operating Environments

Richest set of integrated software with HP-UX 11i v3 shortens time to deployment

Pre-Integrated Software Packages

Installation Steps

Reboots

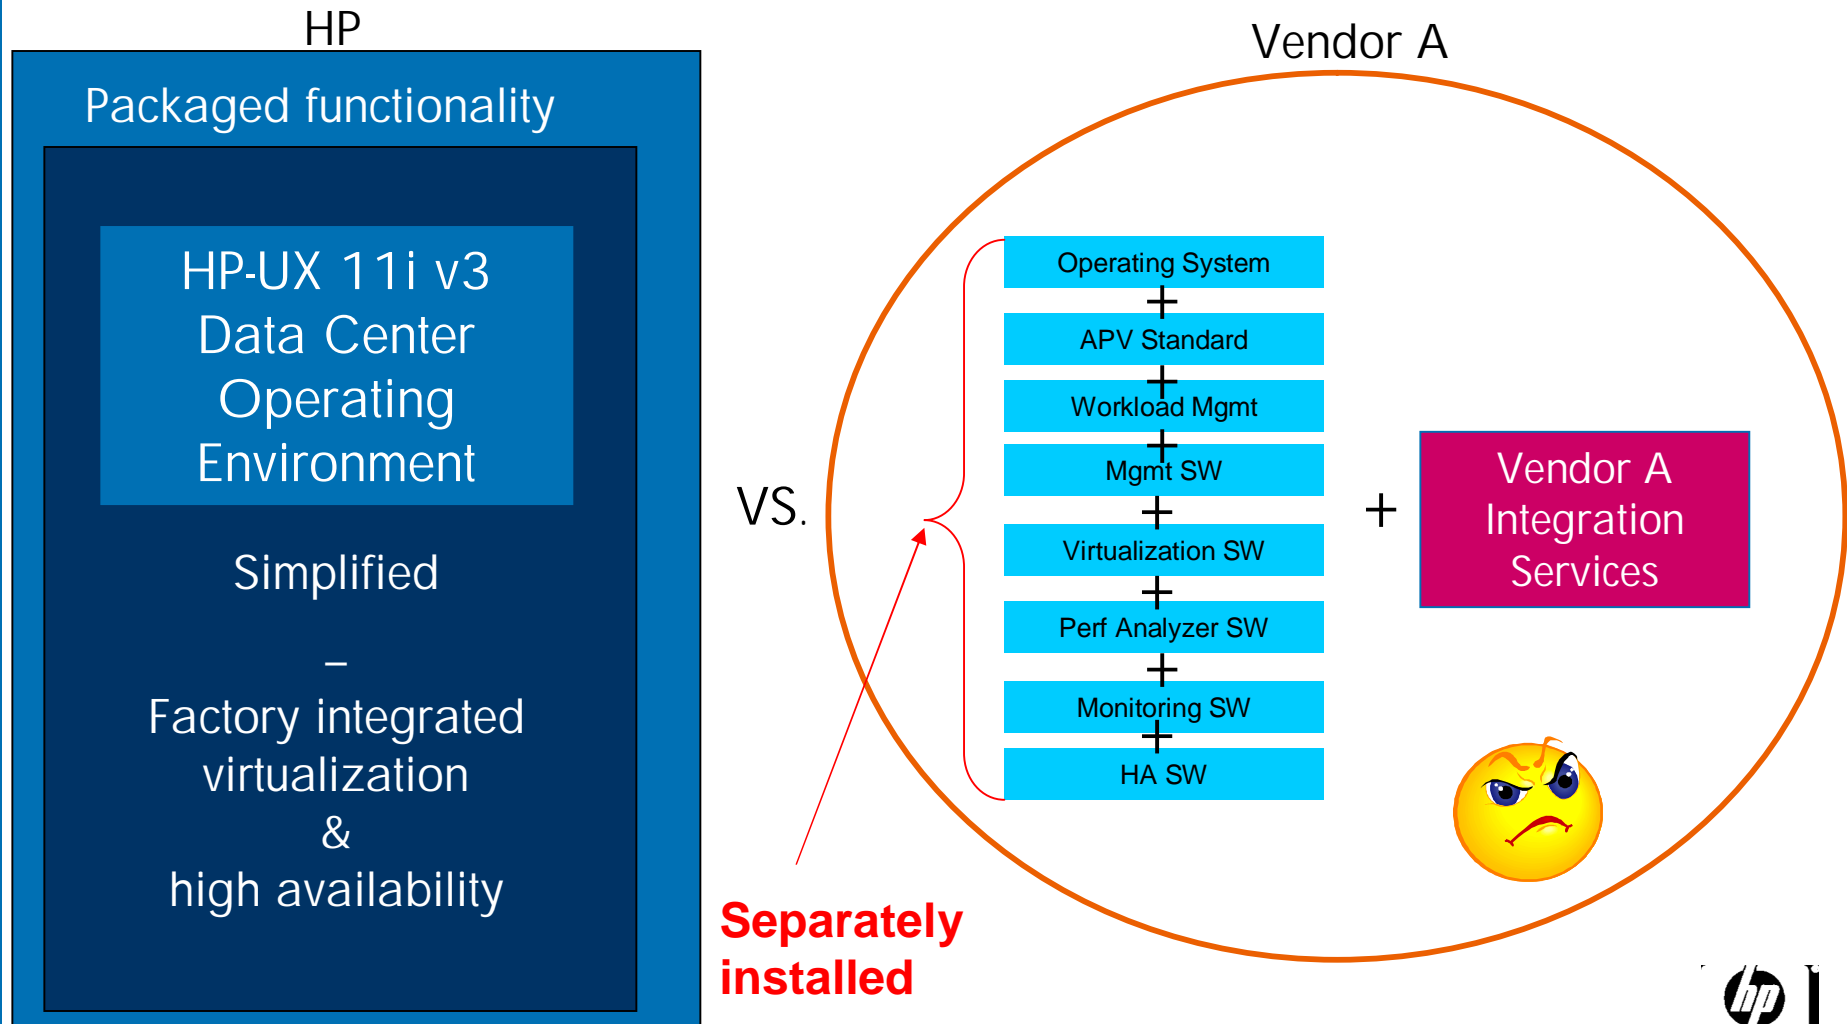

Only HP-UX 11i facilitates changes or operator error correction during the installation

Changing the game with HP integrating in the lab, so customers don't have to!

Comparing full stacks

What the new operating environments mean to existing HP-UX customers

Achieve your adaptive infrastructure with less time & worry

- Reduce TCO overall by up to 15% compared to v2 on the same hardware:
 - a 60% reduction in planned downtime
 - 14% reduction in operations cost
- Reduced operations costs:
 - More software & support for equal or less money
 - Manage up to 159 software products as one

HP-UX install base moving quickly to v3

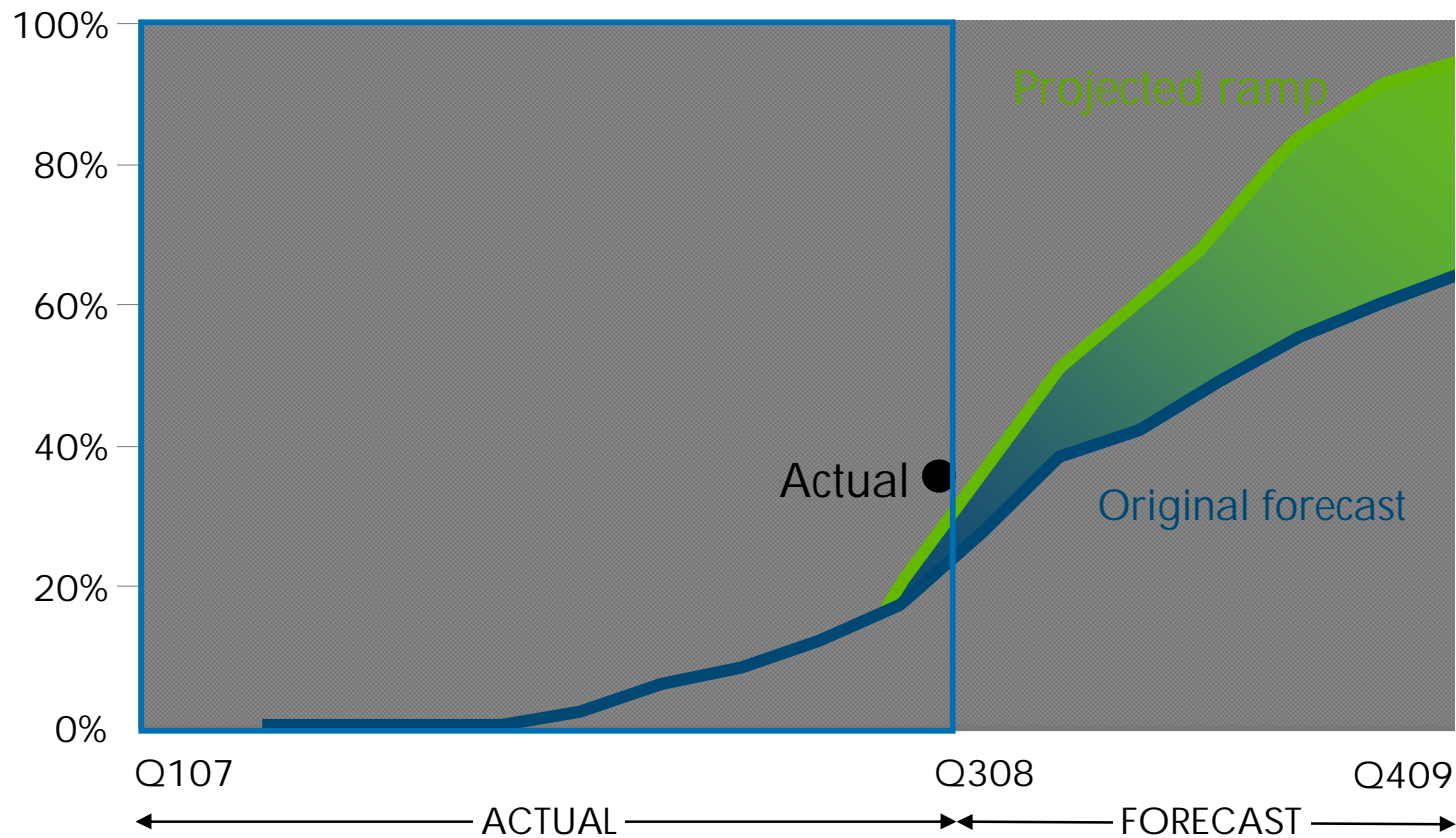

Expected timeframe for implementation
for those planning to migrate to HP-UX 11i v3

HP-UX 11i v3 adoption rate ahead of aggressive HP schedule

Ideas International on HP's leadership

Functionality and integration

"HP-UX has a very strong portfolio of functions ...

Its balanced functionality of core OS features, its superior integration between critical components, and its flexible deployment options . . . make HP-UX ideal for broad deployment across the enterprise."

Ideas International, Inc.

"HP-UX 11i v3 Delivers Superior Capabilities for Virtualized Data Centers", March 2008

www.hp.com/go/v3ideas

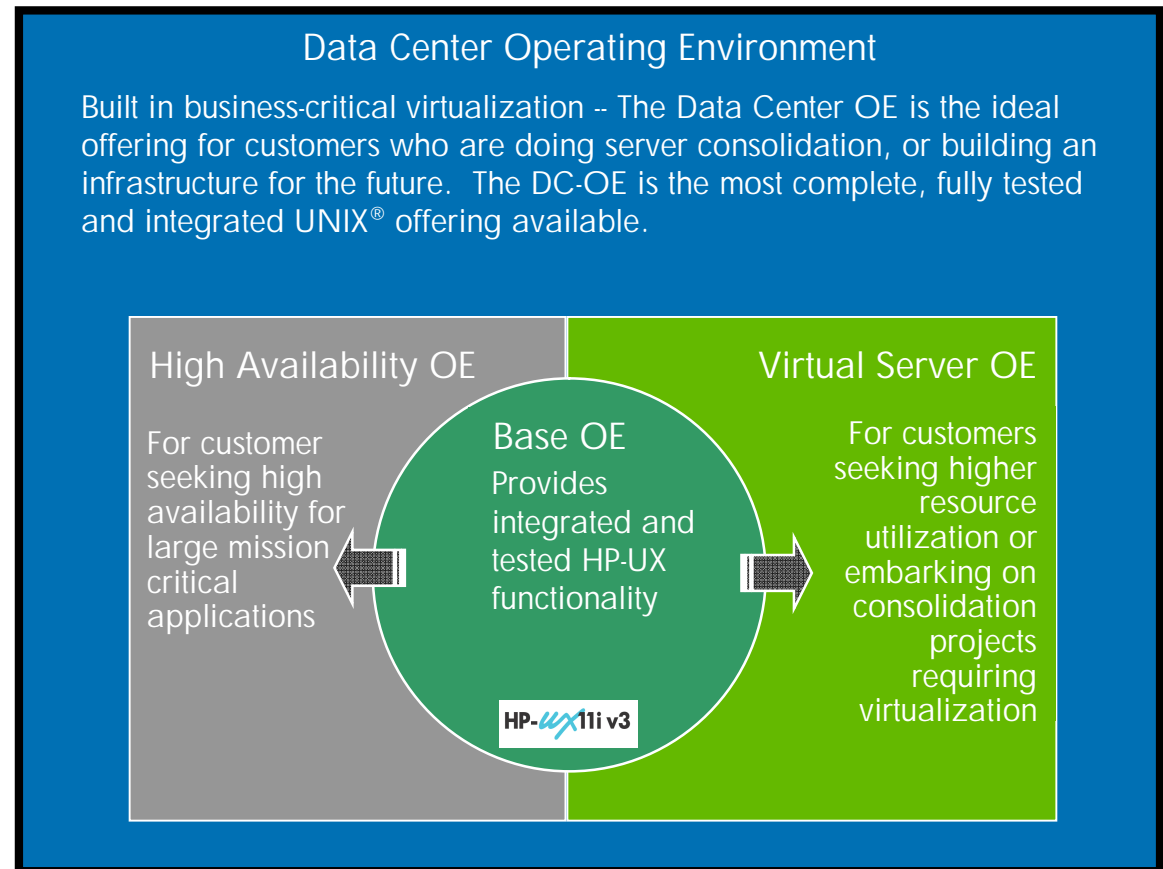

“Selling HP-UX 11i v3 Operating Environments simplifies my selling process to days versus weeks when compared with the previous Operating Environments. The v3 performance optimization and new capabilities have helped me win over both IBM and Sun accounts in the past 12 months. My customers see the value in the added software included in the Operating Environments...especially the new Virtualization Server Operating Environment.”

Scott Reynolds
Account Executive
Agilysys, Inc.
August 1, 2008

Deploy with less worry, cost and risk HP-UX 11i v3 operating environments

- Prepackaged functionality
- 
- Matches customer needs
- 
- Simplified installation
- 
- Reduced risk

HP-ux11i v3

Technology for better business outcomes
